

UreyukiBox — Product Guide

From "looking at stock" to "deciding what to reorder"

UreyukiBox is a Shopify app for demand forecasting and purchasing. It brings your sales velocity, on-hand stock and incoming shipments together in one place, so you can decide what to reorder and produce a purchase order for your supplier.

Shopify's own inventory and purchasing app, **Stocky, reaches end of life on 31 August 2026**. UreyukiBox was built first for Japanese stores that need somewhere to move to — but it works just as well for stores that never used Stocky.

Please read first — the app interface is in Japanese

The UreyukiBox admin screens, purchase-order PDFs and barcode labels follow your Shopify admin language — set your admin to English and the app is in English.

Notification emails, Slack and LINE messages are still Japanese only, and support is provided in Japanese. The screenshots below show the Japanese interface, which is what you see with a Japanese admin.

What is available today

Stat us	Capability	What you can do
Avail able	Inventory & sales visibility	See on-hand stock, sales velocity, and which products need reordering, in one list
Avail able	Demand forecast & reorder points	Review the reasoning — safety stock, lead time, seasonality, intermittent demand, and first-lot sizing for brand-new products — then decide the order quantity
Avail able	Purchase orders	Draft a PO per supplier, edit quantity / unit price / tax category, then export to PDF or CSV, or email it straight to the supplier
Avail able	Notifications	Get low-stock alerts by email, Slack or LINE
Avail able	Receiving & PO status	Confirm an order with "mark as ordered", then record receipts — including partial deliveries — in one place
Avail able	Warehouse operations	Stock adjustments with reason codes, stocktakes, transfers between locations, barcode scanning and barcode label printing

Stat us	Capability	What you can do
Avail able	Stocky data copy	Import suppliers, purchase orders, stock adjustments and tax categories with their relationships intact

We do not hide the arithmetic

UreyukiBox does not just show a black-box "recommended quantity".

Order quantity = reorder point – on hand – incoming – already ordered

Sales velocity, lead time, safety stock and the seasonal adjustment are all visible on screen. The goal is not to replace your buyer's judgement, but to put every input they need in front of them.

The screenshot displays the UreyukiBox dashboard for a demo shop. The left sidebar contains navigation links: ホーム, ダッシュボード, 注文書, 発注済み・入荷, 在庫分析, 資金繰りカレンダー, セット商品の在庫, 発注点設定, 発注元情報, Stocky コピー, 通知設定, プラン, and よくある質問. The main content area is titled 'ダッシュボード' and includes a '今すぐ同期' button. Below this, it shows the shop name 'demo-shop.myshopify.com' and a 'Business' status. A table titled '売れ筋 TOP 10 (直近 30 日)' lists the top 10 selling items with their SKUs, names, and sales quantities. At the bottom, there are two alerts: '在庫切れ' for ZK-CANDLE-WD (0 in stock) and '在庫低下' for FD-COFFEE-200G (12 in stock, 24 in order), both with '対応済みにする' buttons.

SKU	商品名	売上数量 (直近 30 日)
FD-COFFEE-200G	スペシャルティ珈琲豆 200g	482
AP-TEE-WHT-M	オーガニックコットンTシャツ ホワイトM	341
FD-TEA-AS-50P	アッサム紅茶 ティーバッグ 50P	298
ZK-CANDLE-WD	木の香りキャンドル	256
FD-CHOCO-DARK	ダークチョコレート 80g	233
AP-TEE-BLK-L	オーガニックコットンTシャツ ブラックL	189
FD-JAM-STRAW	国産いちごジャム 200g	174
ZK-INCENSE-3P	和の香り お香 3種セット	142
FD-COOKIE-MIX	アソートクッキー詰め合せ	128
FD-COFFEE-DRIP	ドリップバッグ珈琲 10P	117

未対応アラート (3)

在庫切れ	ZK-CANDLE-WD 木の香りキャンドル / 現在 0 個 (しきい値 0)	対応済みにする
在庫低下	FD-COFFEE-200G スペシャルティ珈琲豆 200g / 現在 12 個 (しきい値 24)	対応済みにする

Installing it will not silently change your stock

UreyukiBox reads your Shopify products, orders, inventory and locations, and uses them for analysis and purchase orders. **The nightly sync never writes back to your Shopify inventory.**

Your stock levels change only when **you** perform an action in the app:

- **Recording a receipt** with "reflect in Shopify inventory" selected (only the quantity you received)
- **Recording a stock adjustment** (logged with a reason code such as damage or loss)
- **Confirming a stocktake** (the difference against your counted quantity)
- **Recording a transfer between locations** (both the origin and the destination)

Alongside that:

- At install time we ask for **write access to inventory** in addition to read access. It is required for the four actions above; no write happens unless you trigger it.
- Copying data from Stocky never deletes or modifies anything on the Stocky side.
- You can edit a purchase order before you finalise it.
- Receiving a notification never places an order with a supplier automatically.

What can be copied from Stocky

Data	How it is used after the copy
Suppliers	Linking products to suppliers, and as the recipient of purchase orders
Purchase orders	Kept as your historical ordering record
Stock adjustments	Kept as your historical movement record
Tax categories	Applied to purchase orders as reduced 8% / standard 10% (Japanese consumption tax)
Product-to-supplier links	Derived from past purchase orders and used to auto-draft new POs

The source store is detected automatically from the Shopify store where you installed UreyukiBox. Your Stocky API key is used only for the copy itself and is never stored.

Before you copy, press **"Sync now"** at the top right of the dashboard once. If you copy while UreyukiBox still has no products, only the product-to-supplier links come through as 0 — run the sync and redo the copy and they will appear (nothing is duplicated).

Pricing

Paid plans include a 14-day free trial.

Plan	Monthly	Products	Typical use
Free	Free	100	Stock visibility, manual purchase orders, Stocky copy
Starter	¥2,980	1,000	Reorder points, quantity suggestions, auto-drafts, email alerts
Pro	¥5,980	10,000	Everything in Starter, plus Slack and LINE alerts
Business	¥12,800	無制限	Larger stores and multi-location operations

Prices are fixed amounts in Japanese yen and are charged through Shopify's in-app billing. **Stores that pay Shopify in Japanese yen are billed the yen amount shown above. Stores that pay Shopify in another currency are billed the corresponding amount in that currency.** The Shopify App Store listing shows an approximate USD figure automatically — that is a platform behaviour, not a separate price.

Pricing and features are as of 2026-07-31. Please confirm the current terms shown on the actual billing screen.

Why we built it

Stocky's end of life leaves Japanese stores with some specific gaps:

- Purchasing workflows that are usable in Japanese without guesswork
- Purchase orders that handle Japanese tax categories and qualified-invoice registration numbers
- Alerts that arrive on LINE and Slack, not just email
- A demand forecast a buyer can actually explain to their colleagues

UreyukiBox is not a screen-for-screen copy of Stocky. The aim is to join up "deciding the order", "explaining it internally" and "sending the purchase order" into one flow.

Roadmap

The following are plans, not commitments under your current contract. Content and ordering may change depending on Shopify's API availability, app review, and user feedback.

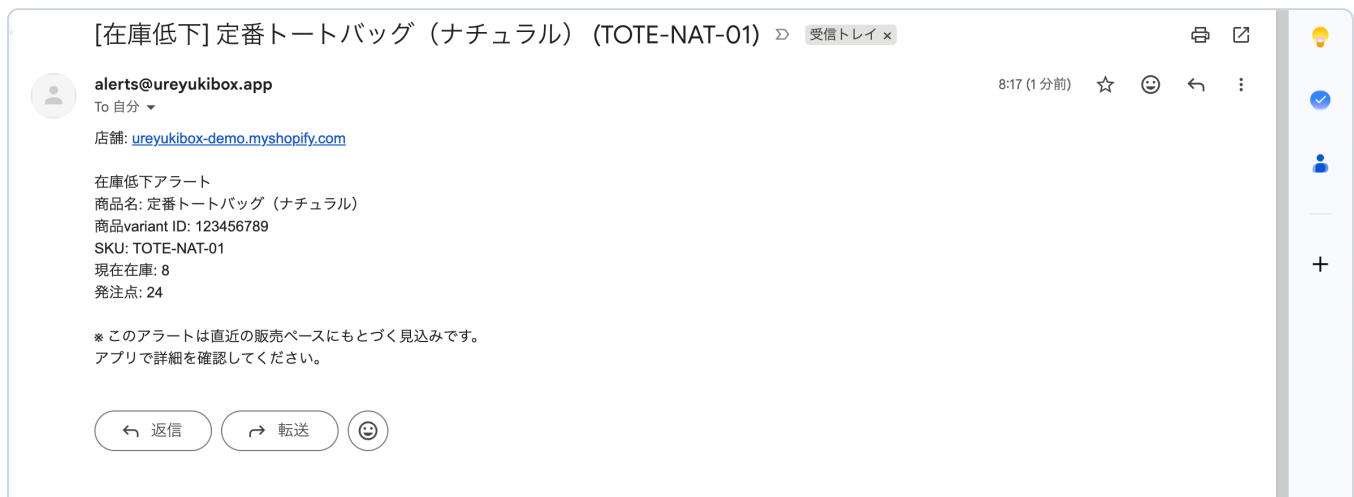

Category	Plan
Planned	"Days until stockout" and "lost sales" visibility, plus a weekly digest

Category	Plan
Planned	Landed cost — allocating freight, duties and other charges across line items
Planned	Profit and supplier reports (margin by product, unit-price trend and delivery reliability by supplier)
Available	English UI — follows your Shopify admin language. Notification emails, Slack and LINE messages remain Japanese only, and support is in Japanese
Waiting on API	Native purchase-order ledger integration once Shopify ships a write API
Under consideration	Stronger multi-location and multi-store inventory decisions
Under consideration	Accounting integrations (freee, Money Forward, Yayoi, and similar)

※ **Receiving, purchase-order status management, and the full order-to-receipt history are already available** — as are stock adjustments, stocktakes, transfers between locations and barcode scanning.

Support

We can help in Japanese with pre-purchase questions, copying from Stocky, and day-to-day operation. English email support is available, but please note the product interface itself remains Japanese for now.
